

DELTA spectrum - Find out how to restore & rejuvenate the younger YOU

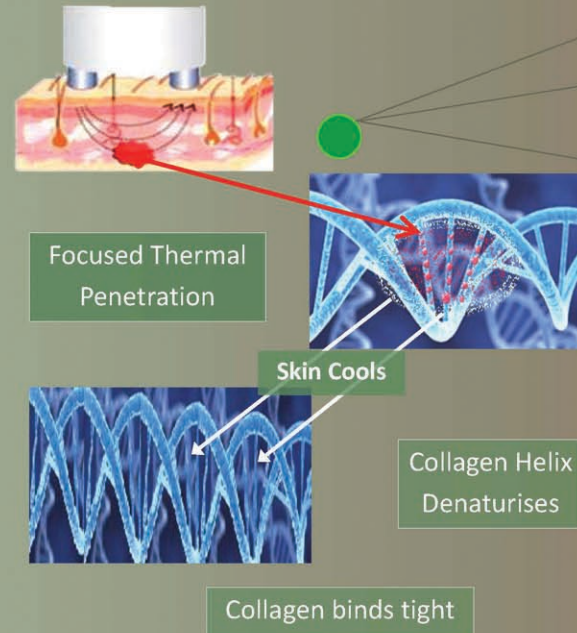

Cellulite Lymphatic Drain

Soothing Ultra Sonic pulses target adiposities (subcutaneous fat cells) causing them to vibrate away from the fibrous connective tissue between your skin and muscles. The Lymphatic system can then easily remove these cells, allowing your skin to look firmer, Naturally.

Collagen Rejuvenation

Controlled Bi-Polar RF energy is focused into the Dermal Layers of your skin, effectively denaturising aged Collagen strands, resulting in tighter, younger looking skin.

DELTA spectrums ultrasonic frequency produces a cavitation effect on the fatty cellulite cells between your skin and muscle fibres.

Detached from the subcutaneous layer of the skin they are easily removed by the bodies lymphatic system.

The advanced DELTA spectrum system induces collagen contraction by breaking the "Tri-Helix" fibrous bands (collagen) through focused and controlled thermal denaturisation.

This unique method of protein stimulation activates the skins existing collagen matrix, allowing it to retract and tighten.

The treated dermal layer continues producing young new collagen, adding strength to the matrix, sustaining the skins elasticity and youthful glow.
